

## **SENSORY STIMULATION FOR AUTISM**

The University of California Irvine, in collaboration with For OC Kids Neurodevelopmental Center, is seeking volunteers to participate in the study of a potential effective treatment for autism using mild forms of sensory stimulation.

Eligible subjects must be between 3-6 years of age and have a diagnosis of autism. Benefits may include improvement in the symptoms of autism. The study will require four visits to UC Irvine over the course of 6 months for behavioral and cognitive testing with visit length ranging from 1 to 2 hours. The testing of your child and investigational treatment will be given at no cost to you or your insurance company. This study will include approximately 90 subjects, and the investigational treatment will involve about several minutes of your time, 4 times a day for six months. You will receive \$100 as compensation at the completion of the study.

Please note that your decision to be in any study is totally voluntary. Any care that you receive at UC Irvine will not be altered by your decision to participate or not participate.

Please contact Michael Leon, Professor of Neurobiology and Behavior at UC Irvine at 949-824-5343 for more information.
